DETAILED ACTION

The art unit designated for this application has changed. Applicant(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

Applicant is hereby notified that the required timing for the correction of drawings has changed. See the last 6 lines on the sheet, which is attached, entitled "Attachment for PTO-948 (Rev. 03/01 or earlier)". Due to the above notification Applicant is required to submit drawing corrections within the time period set for responding to this Office action. Failure to respond to this requirement may result in abandonment of the instant application or a notice of a failure to fully respond to this Office action.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I, claims 1-13, drawn to a method for selecting oligonucleotide probes, classified in class 435, subclass 69.1. If this group is elected, an election of species is also required.

Group II, claims 14-39, drawn to a system for selecting oligonucleotide probes, classified in class 702, subclass 19. If this group is elected, an election of species is also required.

The inventions are distinct, each from the other because of the following reasons:

The inventions of Groups I and II are independent. Inventions are independent if it can be shown that they are not disclosed as capable of use together, or they have different modes of operation, or they have different functions, or they have different effects. (MPEP § 806.04, MPEP § 808.01). Each of the above Groups are directed to distinct inventions in that different

Art Unit: 1631

considerations are required for each as listed with each of the above groups. For example, a method for selecting oligonucleotide probes of Group I is directed a method of selecting oligonucleotide probes, whereas Group II is invention directed to a computer program code and system for predicting hybridization intensities and quantitative responses of said candidate probes. These inventions have different effects.

Therefore, there clearly would be an undue search burden to search all Groups together as each search would be directed to different inventions thus supporting this restriction requirement as given above.

SPECIE ELECTION REQUIREMENT FOR GROUPS I and II:

This application contains claim directed to the following patentably distinct species of the claimed invention: These species are distinct because they each add a feature to the inventions with different and distinct functions which each would require a separate and burdensome search to add to the search for the basic selecting probes as defined above.

Groups I and II:

Specie A: selection of probes via only predicting quantitative response and hybridization intensities to a target;

Specie B: selecting of probes by additionally predicting mismatch hybridisation intensities.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claims are finally held to be allowable. Currently, the following claims are generic to all species in their respective groups: Group I claims 1 – 4 and 8-11; Group II claims 14-17, 22-30 and 35 - 39.

Art Unit: 1631

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, the specie elections for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR § 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
